

Brief for searching for foreign projects

The Department of Transport and Road Infrastructure Development of Moscow is developing and trying to make the movement of Moscow residents as convenient and comfortable as possible. Our focus is to search for new solutions, analyze the world's best practices and find the most relevant and in-demand products.

We are inviting foreign early-stage start-up projects to participate in the Moscow Transport Innovations project (Project).

Projects selection criteria:

- the presence of two and more persons in the team
- MVP or solution prototype
- compliance with the areas of the Project

We offer:

- implementation of pilot projects in Moscow transport
- constructive feedback from industry experts
- team training
- two-month acceleration program with trackers
- potential partnerships and investments

You can find detailed information about the Project and submit a request for participation on the website ftim.ru.

Project search areas:

Unit	Subject
Navigation and operation	Navigation systems Ticket solutions Operation of transport
Communication, monitoring and record-keeping	Internet of Things Sensors, monitoring and record-keeping systems Communication and alarm systems
Data, algorithms and intelligence	Big data Computer vision Artificial intelligence Algorithms related to traffic management
Safety and security	Transport disinfection systems Traffic security Access control system
E-commerce, advertising	Advertising technologies on transport Trading services Industrial design
